Automation System Risk Assessment Program

Assure optimal system performance and minimize costly downtime

1. DISCOVERY
2. ASSESSMENT
3. DELIVERY

Quality you can Trust
The Automation System Risk Assessment Program (ASRA) is offered to your organization to assure optimal system performance and minimize costly downtime.

The purpose is to provide a complete evaluation of your facilities automation systems and spare parts inventory and identify any potential need for key replacement components due to obsolescence or compatibility. Our experienced engineers will identify possible end-of-life issues and develop modernization strategies as needed.

Our Program Specialist will schedule an on-site facility visit, and will work quickly and efficiently to provide an in-depth review and documentation of your automation system.

Complete inventory of system parts in use by location, part number and manufacturer.

- Review and listing current spare parts inventory by location, part number and manufacturer.
- Assess overall system risk based on available replacements, end-of-Life issues, or product obsolescence.
- Qualitrol certified technicians use state-of-the-art applications to attain, organize, and research this data for your future use.
Automation System Risk Assessment Program

### DELIVERY
After in-depth analysis, The Automation Risk Assessment of the facility is prepared for our customer. Included with hard copy and electronic version of the facilities complete inventory, Qualitrol provides a recommendation for automation assurance:

- List of parts we will buy
- List of recommend parts to be purchased for spare back up and avoiding downtime
- List of parts Qualitrol can re-warranty

Also included:

- Program archiving: system program files and photos of installed equipment for future reference
- Modernization and migration road-map for end-of-life issues, or obsolete systems
- If requested: on-site training, scheduling of preventative maintenance, or trouble-shooting webinar
