

# STACK-O!

**STACK-O!** from CIMTEC Automation is a non-contact measuring device for determining the height of a stack of cookies or crackers.

Built from food grade T304 stainless steel, Stack-O! uses laser triangulation and a 32-bit floating point controller to accurately display the height of a stack of baked goods to 1/100<sup>th</sup> of an inch. This value can then be transmitted over USB (standard) or Ethernet (optional).

Stack-O! lists for \$6,995 but is available to preferred customers at a discount based on quantity ordering. Please e-mail [sales@cimtec.com](mailto:sales@cimtec.com) for more information.
